

**Gigahertz  
Innovation**  
Since 1989

Your reliable partner for Gigahertz Innovation in the field of systems and components for exceptional ground station antennas. Our solutions are key factors for the success of global communication systems and interplanetary space missions.

What we do:

- System design from 1GHz up to 70GHz
- Single- and multiband feed systems
- Antenna design and performance simulation
- Switching & combining systems
- Standard waveguide components

## MIRAD Company Handover

Dear Clients

MIRAD microwave AG has been setting milestones in microwave technology time and again since 1989 with its systems for exceptional ground station antennas. Solutions and components implemented by our team are key to the success of global communication systems and interplanetary space missions. Today, MIRAD would like to inform you of a groundbreaking milestone in the company's history.

Founding member, long-time majority shareholder and CEO of MIRAD, Mr. Tony Blättler, has paved the way for an internal company handover. A successful management buyout was made possible thanks to the participation of several long-standing employees, offering an extremely satisfying and future-oriented succession solution for all parties involved.

We are committed to building on the success story of MIRAD microwave AG, and are very pleased that for at least another two years, the company will continue to benefit from the experience and know-how of our former CEO, Mr. Blättler, who will continue to support MIRAD in complex technical developments and strategic decisions. The entire MIRAD team would like to thank him for the smooth and successful handover.

Together, we are ready to take on future challenges with our clients, offering expert advice, outstanding product quality and remarkable determination. We are convinced that our enthusiasm and dedication to microwave technology will enable us to further establish ourselves in the global market for satellite communications.

We take this opportunity to thank our clients, suppliers and partners with whom we would like to continue to work moving forward, in order to successfully complete numerous projects.

We are already looking forward to many stimulating conversations. For any questions you may have, please do not hesitate to contact us.

Thank you very much and kind regards,

**Stephan Schempp,**  
head of sales  
member of management

**Hannes Hörmann,**  
head of rf system design  
member of management

**Ralf Eisengräber,**  
head of antenna design  
member of management

**Thomas Strebel,**  
managing director  
member of the board

**Christian Huber,**  
chairman of the board
